## Every State Has at Least 1 Port of Entry

A map of the United States showing the distribution of 100 sampling locations. The locations are marked with colored dots across the country, with a high concentration in the Northeast and along the West Coast.

## CDC Quarantine Stations and Their Jurisdictions

The map displays the United States with various jurisdictions color-coded. Yellow dots indicate the locations of CDC Quarantine Stations. The jurisdictions and their corresponding colors are:

- Alaska (AK): Light blue
- Alaska (Anchorage): Yellow dot
- Washington (WA): Purple
- Seattle: Yellow dot
- Oregon (OR): Purple
- Idaho (ID): Purple
- Montana (MT): Purple
- North Dakota (ND): Orange
- South Dakota (SD): Orange
- Minnesota (MN): Orange
- Minneapolis: Yellow dot
- Wyoming (WY): Light green
- Nebraska (NE): Orange
- Colorado (CO): Light green
- Utah (UT): Light green
- Nevada (NV): Light green
- California (CA): Light green
- San Francisco: Yellow dot
- Los Angeles: Yellow dot
- San Diego: Yellow dot
- Arizona (AZ): Blue
- New Mexico (NM): Light green
- El Paso: Yellow dot
- Kansas (KS): Teal
- North Texas (TX): Teal
- South Texas (TX): Teal
- Dallas: Yellow dot
- Oklahoma (OK): Teal
- Missouri (MO): Teal
- Arkansas (AR): Teal
- Illinois (IL): Light purple
- Chicago: Yellow dot
- Indiana (IN): Light purple
- Michigan (MI): Light purple
- Detroit: Yellow dot
- Wisconsin (WI): Light purple
- Iowa (IA): Light purple
- Kentucky (KY): Light purple
- Ohio (OH): Light purple
- Pennsylvania (PA): Dark green
- New York (NY): Red
- Boston: Yellow dot
- Massachusetts (MA): Red
- New Hampshire (NH): Red
- Vermont (VT): Red
- Connecticut (CT): Red
- Rhode Island (RI): Red
- New Jersey (NJ): Red
- New York (New York): Red
- Newark: Yellow dot
- Philadelphia: Yellow dot
- Delaware (DE): Red
- Maryland (MD): Red
- Washington DC: Red
- Virginia (VA): Dark green
- West Virginia (WV): Dark green
- Tennessee (TN): Purple
- North Carolina (NC): Purple
- South Carolina (SC): Purple
- Georgia (GA): Purple
- Atlanta: Yellow dot
- Alabama (AL): Blue
- Mississippi (MS): Blue
- Louisiana (LA): Teal
- Houston: Yellow dot
- Florida (FL): Blue
- Miami: Yellow dot
- Hawaii (HI): Pink
- Honolulu: Yellow dot
- Guam (GU): Pink
- Puerto Rico (PR) and Virgin Islands (VI): Green
- San Juan: Yellow dot

Legend: Yellow dot = CDC Quarantine Stations

# Management of Ill Travelers

Ill travelers arriving at a US point of entry are referred to CDC if they have symptoms that could be a communicable disease of public health concern.

CDC staff assess ill travelers to determine public health risk.

If reasonably believed to have a disease of public health concern, ill travelers can be referred for medical evaluation and care.

# US Reporting Requirements for Airlines

Notify CDC of all deaths and any illnesses in travelers with\_\_\_\_\_

- ❑ Fever (measured temperature of  $\geq 100.4^{\circ}\text{F}$  [ $38^{\circ}\text{C}$ ]) and one or more of these conditions:

- Skin rash
- Persistent diarrhea
- Persistent cough
- Persistent vomiting
- Difficulty breathing
- Headache with stiff neck
- Decreased consciousness
- Confusion of recent onset
- Unexplained bleeding
- Appears obviously unwell

- *OR* fever that has persisted for more than 48 hours

# US Diseases of Public Health Concern During Travel

- Cholera
- Diphtheria
- Infectious tuberculosis
- Plague
- Smallpox
- Yellow fever
- Viral hemorrhagic fevers
- Severe acute respiratory syndromes
- Influenza that can cause a pandemic

- Measles
- Mumps
- Rubella
- Varicella (chickenpox)
- Pertussis (whooping cough)
- Meningococcal disease

Federal isolation and quarantine are authorized for these communicable diseases.

The president can revise this list by issuing an executive order.

# CDC Quarantine Station Response to Reported Ill Traveler

CDC staff assess if illness is a public health threat and initiate appropriate public health action.

Three possible actions from CDC's assessment:

1

Recommend seeking medical care or delaying travel until noninfectious

2

Require ill traveler to be medically evaluated if suspected of having a quarantinable disease

3

Allow travel to resume if illness is not believed to be a public health threat

# Typical US Process for Notification and Response

## Notification

- Ill travelers enter the United States via airports, land borders, and seaports.
- CDC learns of the illnesses from CBP or other partners.

## Response

- *On site:* CDC quarantine staff board the conveyance with emergency medical services (EMS) and conduct a public health assessment.
- *If NOT on site:* CDC quarantine staff obtain EMS's assessment and communicate CDC's recommendations by phone.

# What is your role in protecting the health of people at [POE]?

- ❑ Notify Port Health\* of potential public health events
- ❑ Collect and share information
- ❑ Distribute health information
- ❑ Provide security
- ❑ Others?

It is everyone's responsibility to **RECOGNIZE** and **ISOLATE** an ill traveler, and **NOTIFY** and **GIVE SUPPORT** to Port Health!

### **RECOGNIZE ILL TRAVELER**

- See back of card

### **ISOLATE**

- Separate ill person  $\geq 2$  meters from others

### **NOTIFY**

- If situation is a life or death emergency, call emergency medical responders
- Alert supervisor
- Notify health authority

### **GIVE SUPPORT**

- Follow instructions of supervisor and health authority

[POE Port Health  
Phone Number]

### **RECOGNIZE ILL TRAVELER**

Look, listen, or ask for signs and symptoms of illness

**Alert supervisor for any traveler who:**

- ☒ Says he or she may have a **FEVER**  
**AND**
- ☒ Reports having, or is observed with, **ONE or more** of the following conditions:

- Continuous cough
- Difficulty breathing
- Continuous diarrhea
- Continuous vomiting
- Skin rash
- New unusual bruising or bleeding (not from injury)
- Confused mental state
- Looking obviously unwell

**Wash hands for 15-20  
seconds after every incident**

The **RING** Card: a step-by-step tool to facilitate detection and response to public health events

# ***RING*** steps

## ❑ ***RECOGNIZE***

- Potential public health events (signs and symptoms) at [POE]

## ❑ ***ISOLATE***

- People who may represent a public health event

## ❑ ***NOTIFY***

- Port Health
- Immediate supervisor
- Emergency medical services, if life-threatening

## ❑ ***GIVE SUPPORT***

- Follow instructions of immediate supervisor and Port Health

# **RECOGNIZE:**

## **Look for, listen for, ask about**

**FEVER\***

**AND**

**ONE or more** of the following conditions:

- Persistent coughing
- Difficulty breathing
- Continuous diarrhea
- Continuous vomiting
- Skin rash
- New unusual bruising or bleeding (not from injury)
- Confused mental state
- Looking obviously unwell

**When in doubt, contact Port Health**

\*Consider fever if the ill person tells you he/she feels feverish, has an actual measured temperature of  $\geq 38^{\circ}\text{C}$ , or has a flushed face or chills.

*Confused mental state*

*Fever*

*Continuous coughing*

*Continuous vomiting*

## **RECOGNIZE:** **Signs and symptoms**

*Continuous diarrhea*

*New unusual bruising or  
bleeding (not from injury)*

*Skin rash*

# RECOGNIZE: Fever

- ❑ Shivering
- ❑ Sweating a lot
- ❑ Wearing abnormally warm clothing
- ❑ History of feeling hot and having taken medication to prevent fever

*Fever is a common symptom for many infectious diseases (Ebola and other hemorrhagic fevers, influenza, measles, meningitis, etc.)*

# **RECOGNIZE:** **Continuous coughing**

Frequent and severe enough to catch attention of employee or another person

*Continuous cough may indicate pertussis (whooping cough), tuberculosis, pneumonia, or influenza*

# **RECOGNIZE:** **Difficulty breathing**

- ❑ May be gasping for air
- ❑ Unable to “catch” their breath
- ❑ Feels “short of breath”
- ❑ Breathing too fast or too slow

*Difficulty breathing may indicate pneumonia, diphtheria, or influenza*

# **RECOGNIZE:**

## **Continuous diarrhea**

If diarrhea is frequent and severe enough that an employee or another person notices (for example, a person has been to the toilet numerous times)

- ☐ *Continuous diarrhea may indicate the person has a foodborne or waterborne infection such as cholera*
- ☐ *Diarrhea is also a common symptom of viral hemorrhagic fevers such as Ebola*

# **RECOGNIZE:** **Continuous vomiting**

Anyone who has vomited two or more times (not because of airsickness) or expresses concern to either an employee or others

- ☐ *Continuous vomiting may indicate the person has a foodborne or waterborne infection, such as cholera*
- ☐ *Vomiting is also a common symptom of viral hemorrhagic fevers such as Ebola*

# **RECOGNIZE:**

## **Skin rash**

- ❑ Abnormal areas on the skin that are often red or pink
- ❑ Rash may be flat, raised, blister-like, and/or crusted
- ❑ Rash may consist of separate spots, or it may run together; it may include one area of the body, such as the face, or more than one area

*Examples of diseases that cause fever and rash include measles, rubella (German measles), and varicella (chickenpox)*

**RECOGNIZE:**  
**New unusual bruising or  
bleeding (not from injury)**

Noticeable and unusual bruising or bleeding from the gums, ears, nose, or areas on the skin for which there is no obvious explanation

*Bruising or bleeding, especially in the presence of fever, may indicate that the person has a hemorrhagic fever, such as Ebola or yellow fever*

# **RECOGNIZE:** **Confused mental state**

- ❑ Not aware of surroundings
- ❑ Does not respond normally to questions or painful stimuli
- ❑ May appear to be sleepy or groggy or be confused about who they are, where they are going, or the time of day or week

*Confusion may indicate meningitis or a serious infection in another body system*

# **RECOGNIZE:**

## **Observations or questions to consider**

### ❑ **Observations**

- You notice a person who seems unwell
- You notice a person who appears to have a flushed face
- You notice a person who is coughing continuously

### ❑ **Questions**

- How are you feeling?
- How long have you felt sick?
- Do you feel feverish?

# ***/ISOLATE:***

## **Separate**

- At least 2 meters from others OR in an empty room
- Provide a surgical mask (if available), or tissue, or ask the person to cover their nose and mouth if the person looks ill and
  - Is coughing or sneezing
  - Has a rash
- Do not provide a mask if the person is vomiting or cannot tolerate one

# ***/ISOLATE:***

## **Not the same as quarantine!**

*Isolation and quarantine are public health practices used to stop or limit the spread of disease.*

- ❑ **Isolation:** Separating sick people with a contagious disease away from people who are not sick
  - In your role, this may just mean asking the person to remain in a less crowded area
- ❑ **Quarantine:** Separating and restricting the movement of people who were exposed to contagious disease to see if they become sick
  - This is beyond your role at [POE]

## **NOTIFY:**

- ☐ Port Health
- ☐ Immediate supervisor
- ☐ Other relevant airport stakeholders

*Provide ill person's:*

- ☐ *Signs and symptoms*
- ☐ *Any information about potential contacts (other individuals in traveling party who may have been exposed)*
- ☐ *Other relevant information you received*

# NOTIFY:

## Which situation should be reported to Port Health?

- ❑ A drunk traveler who vomits

- ❑ A traveler suffering from continuous diarrhea

- ❑ An airport worker suffering from a fever and cough

- ❑ A pregnant woman who is vomiting

## ***GIVE SUPPORT:***

- ❑ There may be other tasks you can perform to help Port Health during a potential disease threat
- ❑ Port Health or other agencies may ask for your assistance
- ❑ Can you name some examples of ways your agency can provide further support?

## **GIVE SUPPORT:**

### **Examples of support during a public health event**

- ❑ Gather information from ill person
- ❑ Separate ill person from others
- ❑ Provide security assistance
- ❑ Distribute or collect health forms/information

*Additional information may be requested from law enforcement, airline, or shipping agencies to assess whether to take steps to*

- ❑ *Prevent further travel*
- ❑ *Contact those who were potentially exposed*

# Personal Protective Equipment for Evaluation of Ill Passengers

## ❑ Commonly used

- Gloves
- Handwashing

## ❑ Less frequent

- Face mask
- Respirator
- Face shield or eye protection
- Gown
- Foot protection

# Importance of Vaccination for POE Staff

- ❑ Measles: multiple outbreaks where passengers & point-of-entry personnel were infected
- ❑ Influenza

## Health Information for Port Partners: MEASLES

**You might process international travelers who have measles.**

**Measles is highly contagious.**

Measles is a virus that spreads easily from person to person by coughing or sneezing even *before* the rash appears—and can cause serious illness, even death. People in the same area may breathe in the virus and become sick.
