

Department of Disease Control

Weekly Disease Forecast No.241_Leptospirosis (22 – 28 December 2019)

From the national disease surveillance system, the Department of Disease Control reveals that this year up to 22 November, there had been 1,961 leptospirosis patients (28 had died). Most of the cases were farmers. The Top-five provinces with the highest incidence rate (case per 100,000 population) were Ranong, Phangnga, Sisaket, Yasothon, and Trang respectively. The Leptospirosis incidence was highest in the southern followed by the northeastern, northern, and central regions respectively. In December, one case each was found in the southern provinces, i.e, Yala and Phatthalung.

According to this week disease forecast, the sporadic occurrence of leptospirosis is likely, especially in the southern region where rain with flooding in some areas have been continued.

Leptospirosis is transmitted from contacting with contaminated animals' urine while working in wet land or areas after flooding. The leptospira bacteria enters human body through skin with superficial cuts and open wounds or mucosa of mouth, eyes and nose or through waterlogged skin.

If symptoms occur within 1-2 weeks after exposure, including high fever, chills, muscle aches (most notable in the calf and lumbar areas), red eyes, and jaundice (yellow skin and eyes), the patients should go to the hospitals nearby for prompt life saving treatment. Informing the doctors the history of wet land and water exposure is very useful. In severe cases, delay in seeking medical attention might end up with complications such as renal failure, pulmonary hemorrhage or myocarditis or even death.

The Department of Disease Control encourages people to help control the rat population in agricultural areas and around houses. Farmers and people who have to wade in flood water should wear rubber boots or other protective footwares, cover their wounds and abrasions with waterproof bandages, and wash hands and feet immediately right after the exposure. In addition, taking a thorough shower is very helpful.
