• < 1 year old (2 deaths)			
Percentage of COVID-19 deaths that consist of elderly patients, patients with underlying diseases including obesity, or pregnant patients			
	64%	100%	90%

3. Thailand Implementations

- The Ministry of Public Health organized 3 mRNA vaccination sites at Bang Sue Central Vaccination Center, Bamras Naradura Institute, and Srithanya Hospital for those who have not yet received their first dose of the vaccine or who have reserved an alternate vaccine. People who have reserved Alternative vaccines in other provinces will be surveyed and the mRNA vaccine will be delivered to them by the provincial public health office.
- Chiang Mai Province issued measures to prevent the spread of COVID-19 among foreign workers. The employers or owners of the establishment must bring their foreign employees of all types in the systems residing in the area of Mae Rim, San Sai, Doi Saket, San Kamphaeng, Saraphi, and Hang Dong District who have not been tested for COVID-19 and injected the vaccines to get the test and vaccine.
- The Center for COVID-19 Situation Administration (CCSA) adjusted the COVID-19 control measures for travel to the country from the operation of the Test & Go system. Travelers are allowed to enter the country through both land and boat routes without

quarantine, if they have a negative COVID-19 result and are able to travel anywhere. It will be starting at Nong Khai checkpoint on December 24, 2021.

- **4. Risk Assessment of COVID-19 Situation**

From COVID-19 situation monitoring, on November 27, 2021, Thailand has 2,100,959 cumulative confirmed cases, of which 6,073 new cases have been confirmed on the day, and 32 deaths, most of which are from the High-risk groups who, when infected, are prone to become severely ill or die. In this regard, the Ministry of Public Health has given priority to the immunization of the population in the country as soon as possible, especially in tourism areas, which need to raise the immunity of the population to a high level, areas with high rates of new confirmed cases, and in the risk groups with the possibility of severe illness or death include the elderly aged 60 years and over, those with 7 chronic diseases, and pregnant women with gestational age of 12 weeks or more. Also, strictly comply to disease prevention measures, for example, wearing mask, keeping distance, and washing hand frequently is still important to reduce the spread of the disease.
